

## CLAIMS:

1. An electrical device (2) for applying a hair coloring additive to hair, which device comprises:
  - a container (3) for hair coloring additive, said container (3) having a first side (4) and a second side (5), said first side (4) being covered by a base part (6) provided with hair contacting elements (7) and additive outlets (8), and an additive displacing member being provided in the vicinity of said second side (5), and
  - electrical actuator means (10) for forcing said additive displacing member (9) towards the base part for expelling additive from said container (3) through said additive outlets (8),characterized in that the base part (6) is in its entirety detachably connected to the device (2).
2. A device as claimed in Claim 1, characterized in that the base part (6) is in its entirety detachably connected to the container (3).
3. A device as claimed in Claim 1 or 2, characterized in that the device comprises at least one further base part (61) which comprises further hair contacting elements (71) and is in its entirety detachably connected to the device (1).
4. A device as claimed in Claim 1, characterized in that the hair contacting elements (7) comprise hollow pins (7') each provided with an additive outlet (8').
5. A device as claimed in Claim 3, characterized in that the further hair contacting elements (71) comprise brush hairs (71').
6. A device as claimed in Claim 1, 2 or 3, characterized in that a surface (11) of at least one of the base parts (6, 61), on which the hair contacting elements (7) or the further hair contacting elements (71) are provided, comprises a depression (12).

7. A device as claimed in Claim 6, characterized in that said depression (12) is provided in the vicinity of the hair contacting elements (7) or the further hair contacting elements (71).

8. A container (3) for use in an electrical device for applying a hair coloring additive to hair comprising said container (3), said container (3) having a first side (4) and a second side (5), said first side (4) being covered by a base part (6) provided with hair contacting elements (7) and additive outlets (8), an additive displacing member (9) being provided in the vicinity of said second side (5), and said device (2) further comprising electrical actuator means (10) for forcing said additive displacing member (9) towards the base part (6) for expelling additive from said container (3) through said additive outlets (8), characterized in that the base part (6) forms a part of the container (3) and is in its entirety detachably connected to the container (3).

9. A container for use in an electrical device for applying a hair coloring additive to hair as claimed in claim 8, characterized in that the electrical device (2) comprises at least one further base part (61), which comprises further hair contacting elements (71) and which forms a further part of the container (3) and is in its entirety detachably connected to the container (3).

10. A container for use in an electrical device for applying a hair coloring additive to hair as claimed in claim 8 or 9, characterized in that a surface (11) of at least one of the base parts (6, 61), on which the hair contacting elements (7) or the further hair contacting elements (71) are provided, comprises a depression (12).
